GRAVITY ROLLER CONVEYORS

Gravity Roller Conveyor Systems are used in such instances as conveying trays, slave boards, cardboard boxes, plastic totes, etc., for either, simply transporting from A to B, or for use in [Kanban](#) scenarios.

As the title states, **gravity** means just that, **using the force of gravity to move products**. There is no power, hence it is simple and extremely **cost effective**. You can either free wheel the products manually (horizontally) or include a slight decline to allow a fall over a certain distance.

Because **Gravity Roller Conveyors** are extremely **modular** they can be utilised in many ways. They can form a crucial role when linked to the end of a powered system, for such purposes as **packing and accumulation**, or they can actually form **full production lines**, such as PC Assembly, Bedding, Industrial Batteries, etc.
