PLASTIC SLAT CONVEYORS

Plastic slat conveyors are predominantly used, and are ideal in such industries as **food and pharmaceuticals**, where **rapid speed and accuracy** is of the utmost importance, plus they also have the ability to be **washed down** for hygiene purposes.

Plastic/Acetal slats are used more for the lighter products, and usually in the food/pharmaceutical industries, where narrow products, such as **plastic tubs, yoghurt and ice cream pots**, etc, are conveyed from various filling machines, through barcode readers and either straight to **packing areas** or straight into **freezers, cool rooms** or **storage areas**.

The design allows for **very fast throughputs** in various configurations, utilising short bend radii, and also allows for the **accumulation** of product.
