PVC/PU BELT CONVEYORS

Pvc/Pu Belt Conveyors (as well as Modular Belt Conveyors) are generally used on assembly/packing lines or in clean areas such as the food and pharmaceutical industries.

The traditional **Pvc/Pu belt conveyor** is still widely used due to it being more cost effective than the more modern modular belting, and in instances such as **horizontal packing, picking or assembly lines etc**, we would generally propose using smooth PVC, or where the belt is in contact with food we would recommend food grade PU.

If an **elevation** is required we would recommend a grip face rubber belt, although if the angle of inclination exceeds approximately **24 degrees** the belt would have to include flights.

Many belts have a **woven back** which helps grip the end and return rollers, and in addition to this we also supply belts that have **tracking strip profiles** underneath which folds down over the steel skid base, **therefore no tracking is required.**
