STEEL SLAT CONVEYORS

Steel Slat Conveyors are predominantly used, and are ideal in such industries as **food and pharmaceuticals**, where **rapid speed and accuracy** is of the utmost importance, plus they also have the ability to be **washed down** for hygiene purposes.

Steel (usually stainless) slat conveyors are predominantly used for **heavier industry**, where the conveyor needs to be built to a very **robust design**, especially when handling heavy steel products such as automotive parts (presented to the conveyor via a robotised system), punched/pressed parts (from underneath machines), etc.

As they are generally situated in dirty and possibly wet conditions, the slats tend to be stainless, rather than mild steel, as their life **expectancy would be greater**.
